

LAB EXPERIMENTS

NAME: ADHIL BIJUKUMAR

Reg No.192411133

COURSE NAME: INTERNET PROGRAMMING

COURSE CODE: CSA4308

EXPERIMENT 6:

The online cake ordering system allows users to browse a variety of cakes by category, flavor, and occasion, complete with detailed descriptions and images. Users can register, log in, and manage their orders through a personal dashboard. The ordering process includes selecting a cake, customizing options like size and message, entering delivery details, and making secure payments via an integrated payment gateway. Admins can manage cake inventory, track orders, and handle user accounts through an admin panel. Users receive order confirmation emails and can track delivery status. The website is fully responsive, providing a seamless shopping experience on all devices. Buy a Cake is a portal which allows admin in developing counters to advertise and sell their cake. This would permit rural communities to make their wares available to the rest of the world. The proposed system is to develop the website for cake store. User can buy the nearby cake available in app. An E Com App is a portal which allows admin in developing products to promote and sell their goods. This would permit rural communities to make their wares available to the rest of the world.

OUTPUT:

EXPERIMENT 7:

The online beauty parlour appointment booking system allows users to browse available services, view stylist profiles, and check appointment slots in real-time. Users can register, log in, and manage their appointments through a personal dashboard. The booking process includes selecting services, choosing a stylist, selecting a date and time, and making secure payments via an integrated payment gateway. Admins can manage service offerings, stylist schedules, and user accounts through a comprehensive admin panel. Users receive appointment confirmation emails and reminders, with the option to reschedule or cancel appointments through their dashboard. The website is fully responsive, ensuring an optimal experience on all devices. This website helps customers to search for any beauty parlour and book appointments as they preferable date and time.

OUTPUT:

EXPERIMENT 8:

In an effort to streamline the appointment process and enhance patient experience, MedCare Hospital has developed an online appointment booking system. This platform allows patients to book appointments with doctors from various specialties at their convenience. Key functionalities include user registration and login, browsing available doctors and appointment slots, booking and canceling appointments, and receiving appointment reminders via email or SMS. Patients can also view their appointment history and update their personal details. The system ensures data security and compliance with healthcare regulations to protect patient information. This online service aims to reduce wait times, minimize paperwork, and provide a seamless experience for patients and healthcare providers alike. This website helps the patient to search any hospital and book appointments as they prefer.

EXPERIMENT 9:

TechSavvy, a leading retailer of electronic gadgets, has launched an online shopping platform to provide customers with a seamless and convenient shopping experience. The website features a wide range of products, including smartphones, laptops, tablets, and accessories, all categorized for easy browsing. Key functionalities include user registration and login, product search and filtering, detailed product descriptions and reviews, secure payment options, and order tracking. Customers can add items to their cart, create wish lists, and receive personalized recommendations based on their browsing and purchase history. The platform also offers exclusive online discounts and promotions, ensuring customers get the best deals on the latest gadgets. The core of an online shop is the product catalogue and the cart. The users browse products which are grouped in categories and add the desired ones to the cart. Next, there is transaction handling, which in its simplest form consists in the order being sent via e-mail to the seller, but most often it takes the whole buying process through separate order statuses.

EXPERIMENT 10:

StyleHub, a premier online fashion retailer, introduces its comprehensive e-commerce platform designed to cater to fashion enthusiasts. The website offers an extensive collection of clothing, footwear, and accessories for men, women, and children, with categories such as casual wear, formal attire, and seasonal collections. Key functionalities include user registration and login, advanced search and filtering options, detailed product descriptions with high-resolution images, customer reviews, and size guides. The platform supports secure payment methods, order tracking, and an easy return and exchange policy. Customers can create wish lists, receive personalized style recommendations, and enjoy exclusive online discounts and flash sales. StyleHub aims to provide a seamless and enjoyable shopping experience, keeping users up-to-date with the latest fashion trends. The core of an online shop is the product catalogue and the cart. The users browse products which are grouped in categories and add the desired ones to the cart. Next, there is transaction handling, which in its simplest form consists in the order being sent via e-mail to the seller, but most often it takes the whole buying process through separate order statuses.
